SIP Trunking

JAZZWARE

What is SIP trunking?

SIP trunking uses the internet to connect the hotel's legacy PBX to the hotel's voice carrier network, reducing expensive, traditional voice circuits and usage costs.

Benefits of SIP Trunking

Cost Savings

- Utilizes existing on-premise PBX equipment
- Reduces telecom facility expenses
- Lowers or eliminates domestic usage costs
- Consolidates communications billing

Brand Acceptance

- Embraced by major hotel brands as the new standard for providing voice services to properties

Business Continuity

- Maintains business continuity by redirecting phone lines quickly during disaster avoidance or recovery
- Replaces end-of-life PRI circuits
- Provides built in redundancy with automatic 4G cellular failover
- Positions property for easy transition to cloud PBX by moving communications to a data network

About Us

TeleManager Analytics utilizes Six Sigma principles to audit and evaluate monthly telecommunications department performance, ensuring optimized costs and revenue.
